Juan José Barrera Jaimes

Pittsburgh, PA | (412) 482-0935 | juanjbarreraj@gmail.com | linkedin.com/in/juanjbarreraj | juanjbarreraj.com

Computer Science and Business Management graduate with a master's degree in Information Systems and Data Analytics. Fluent in English and Spanish, with hands-on experience in software development, web applications, data analytics, and technology-driven projects. Strong background in problem-solving, leadership, customer service, and relationship building, with a proven record of excellence in academic, athletic, and professional settings. Eager to apply technical, analytical, and business skills to improve processes, support business growth, and contribute to technological innovation.

Education

M.S. Information Systems and Data Analytics – Point Park University. (Graduated August 2026) **GPA** 3.92 (4.00)
B.S. Applied Computer Science / Business Management – Point Park University. (Graduated April 2025) **GPA** 3.30 (4.00)

Technology Skills

Python, Java, C#, JavaScript, React, Node.js, Flask, SQL (PostgreSQL, SQLite), HTML, CSS, PHP, Git/GitHub, GitHub Actions CI/CD, Linux, Bash, Postman, Render, Netlify, Tableau, Power BI, Google Charts, Microsoft Office

Creator & Operator – Califree Control Panel (Self-Hosted Game Server Platform) **Aug 2026 – Present**

- Designed, built, deployed, and operate a self-hosted Minecraft server platform on an Oracle Cloud ARM instance: roughly 20,000 lines of Python, JavaScript, Java, and Bash behind Caddy, managed with systemd and cron.
- Developed a **Flask** control panel with 107 endpoints covering authentication (scrypt hashing, HMAC-signed sessions, two-factor), server control, world management, moderation, backups, and two live world maps.
- Built a Java service compiled against the game's own engine to compute world data directly from the seed, plus a pure-Python parser for the game's binary world files.
- Wrote 13 automated test suites (400 assertions) with custom test doubles, and a zero-touch update pipeline with checksum verification, automatic rollback, and GitHub Actions CI/CD to the live host.
- Live at califree.net, serving a whitelisted player community at **$0/month** infrastructure cost.

Founder & Developer – Trackeo (Track & Field Results Platform) **Jul 2026 – Present**

- Designed and developed a track & field results platform, tailored for Latin American athletes and competitions.
- Modeled relational data structures for athletes, meets, and results, enabling querying and filtering of performance data.
- Built the application with **React and Vite** on a layered architecture (domain / application / infrastructure) whose interchangeable data layer runs on IndexedDB in the public demo, with a **Supabase (PostgreSQL)** backend in development.
- Implemented official score sheets generated as matching PDF and Excel pairs, spreadsheet import with automatic recognition, and league rankings and records.
- Wrote 450+ automated tests (Vitest), including a parity suite that verifies both data adapters against one contract.

Full-Stack Software Developer – Open Minds Studios **Jul 2026 – Present**

- Built a full-stack tutoring platform with **React** and a custom **Node.js + Express + SQLite** backend with server-side, role-based authorization for students, tutors, and administrators.
- Designed appointment scheduling workflows, tutor availability management, and student learning module systems.
- Migrated the platform off its original no-code host onto the custom backend, closing a data-privacy gap and covering the API with 69 automated endpoint tests.
- Integrated automated lead-capture with email notifications through Netlify Forms, and modeled application data for users, appointments, courses, learning modules, and tutoring programs.
- Launched the production site at openmindsstudios.com, handling domain transfer, DNS, and the client's email migration.

Full-Stack Web Developer – Pup O'Clock Website Rebuild **Jul 2026 – Present**

- Built and deployed a production **React** web application using React Router, Context API, Tailwind CSS, and Shopify.
- Developed e-commerce components supporting product filtering, variant selection, shopping cart state, and dynamic checkout.
- Integrated **31 Shopify products** through structured product mapping and variant ID configuration for multi-item purchasing.
- Designed responsive, mobile-first interfaces with reusable components, page transitions, and interactive animations.

- Managed production deployment through GoDaddy DNS, SSL configuration, migration off the site's original no-code platform, and custom domain launch at pupoclock.com.

Web Developer – Efficiency Appliance LLC **Jun 2024 – Sep 2025**

- Built and launched a business website for Efficiency Appliance LLC, providing a professional digital presence.
- Designed responsive pages that clearly present services, strengthen customer trust, and improve usability.
- Converted business requirements into a clean, organized website structure focused on accessibility and ease of navigation.
- Supported deployment and go-live execution to deliver a production-ready client website at efficiencyappliances.com.

Data Analytics Project – Data Cleaning & Visualization

- Cleaned raw datasets using Python (pandas), handling missing values, inconsistencies, and data normalization.
- Designed data cleaning workflows to improve data quality, accuracy, and usability for analysis.
- Performed data validation and preprocessing to ensure consistency across multiple data sources.
- Developed interactive dashboards using Tableau and Power BI to visualize trends and support data-driven insights.
- Translated raw data into structured, analysis-ready datasets, improving interpretability and reporting efficiency.

Student and Leadership Experience

Resident Educator / Resident Educator Mentor **August 2022 – May 2024 / August 2024 – May 2025**
Student Life, Point Park University, Pittsburgh, PA

- Supported residential students by promoting a safe, inclusive, and community-focused living environment.
- Mentored Resident Educators by providing guidance, feedback, and support for leadership and skill development.
- Communicated university policies, resources, and expectations clearly to residents and student staff.
- Assisted with conflict resolution, student concerns, and complex interpersonal situations within the residence halls.

Tutor **August 2024 – August 2026**
Tutoring Center, Point Park University, Pittsburgh, PA

- Tutored 3+ students per week in courses like Intro to Programming, Data Structures, and Survey of Programming Languages.
- Conducted one-on-one and group tutoring sessions, focusing on breaking down complex topics into practical examples.

Student Athlete Advisory Committee **August 2023 – May 2025**
NCAA DII, Point Park University, Pittsburgh, PA

- Represented the Track & Field team to advocate for student-athlete interests, policies, and well-being.
- Led community service initiatives to promote and foster a sense of community among different athletic teams.
- Provided input on NCAA and conference legislation, contributing to policy discussions from a student-athlete perspective.

Summer Resident Assistant **June 2026 – August 2026**
Point Park University — Office of Pre-College Programs | Pittsburgh, PA

- Supervised and supported 30 high school students ages 14–17 in a residential summer pre-college program.
- Conducted nightly room checks, enforced residence hall policies, and monitored student well-being before bedtime.
- Created and led student activities to promote community building, engagement, and positive peer relationships.
- Served as a mentor, guide, and supportive point of contact for students seeking personal or social related assistance.
- Assisted Pre-College Programs staff with residential operations, student supervision, and program logistics.
- Ensured a safe, structured, and welcoming living environment while following emergency and safety procedures.
